

# Mud Heads

## Operation and Maintenance Guide

### **Better – Faster – Every time**

*Models: 16TT & 16TT90*

### **Operation**

The Mud Head is designed to place a consistently wide ribbon of joint compound to each side of the internal or external corner for installation of paper tape or corner bead.

Snap the Mud Head onto the corner applicator or MudRunner® and fill it with joint compound. Start at one end of the corner and apply pressure to the corner applicator or MudRunner™ to start the flow of compound while moving the tool along the corner to the opposite end. Now apply the tape or corner bead.

### **Maintenance**

Clean thoroughly with brush and water (or water hose) to remove all joint compound from the tool. After the tool is clean, lightly oil with Ames® Bazooka® Oil or any light machine oil.
